by INARBEL S.A.

SKYLAB

by INARBEL S.A.

Skylab, is a registered trademark owned by Inarbel, S.A., which provides textile solutions suitable for personal protection for clinical, hospital and related purposes. Our mission is to meet the needs, involving our client in all the development and design of our products, always offering safety, complying with all applicable standards and certifications.

Our vision is to be a reference brand in the health sector, improving the day-by-day of professionals as well as the quality of life and safety of patients.

Given the fact that we are a company brand that bets on quality, both in products and in customer service, we can easily establish ourselves in the market, guaranteeing our customers the best price/quality in the market.

Product Portfolio

Our portfolio is composed of four types of gowns whose design was based on three essential factors:

Protection: Our products meet all the requirements included in the NP EN 13795-1:2020 standard.

Comfort: Our gowns are light and comfortable, avoiding the discomfort caused by prolonged use in a clinical or hospital environment.

Reusability: The materials we propose are reusable 20 to 75 times, which in addition to giving them a very low cost for each use, makes them highly sustainable by extraordinarily reducing their ecological footprint as well as the costs associated with recycling.

Besides the bases whose models we have in permanent production, since we already supply important Portuguese and European public and private health institutions, we have also tailor-made solutions, allowing the customization or inclusion of details needed for different types of function.
